

## *Killinger Residence & Workplace*

---

Customer Name: Jennifer Killinger

Location: Southern California

**The challenge:** As a horse show manager, Jennifer Killinger works in an office right next to an arena with lots of exposure to grass, hay and dust. Allergies to these elements had made her miserable, causing her to get sick within a week after every horse show. Coughing, difficulty breathing, congestion and sinus infections became the norm. Symptoms of the allergy and asthma attacks were reduced by taking over the counter medications and using her inhaler on a daily basis, but Jennifer realized she needed some natural relief.

**The solution:** Jennifer heard about the Steril-Zone Room Air Purifier from a friend and decided to give it a try. Because it's portable, she was able to use it at home as well as at the office. The light-weight unit fits neatly under an office table and circulates clean, fresh air throughout the room. Jennifer combined the use of the Steril-Zone with a twice-daily salt-water nose rinse, and almost immediately noticed a difference in her health.

**The results:** "It's fabulous; I love it!" said Jennifer. "It's made a huge difference. I no longer have the allergy and asthma attacks, which means no more congestion and sinus infections. **My usage of over the counter medication has dropped from daily use to only about 10 days per year. Everyone in the office has noticed that I get sick way less often. It's all drug-free, which was my main goal.**"

**About Steril-Zone:** The Steril-Zone Room Air Purifier provides a safe, effective and energy-efficient way to clean the air in rooms up to 1,000 square feet. Using a three-stage purification process, Steril-Zone destroys allergens and pollutants for a whole new level of air cleaning. Steril-Zone uses a patented germicidal UVC Emitter to effectively clean the air of bacteria, viruses and mold, an activated carbon filter to absorb VOCs and odors, and a high-efficiency filter to remove allergens and particulates. Steril-Zone is ideal for residential rooms, apartments, condos, offices, waiting rooms, day care and senior facilities and hotel rooms.
