

"EVIDENCE BASED DESIGN" DETERMINES THE PROPER ENERGY FIELD FOR AN EFFECTIVE UVC INSTALLATION

Since Steril-Aire pioneered the use of UVC in HVAC systems in 1994, the acceptance of and dependence on UVC Solutions has grown dramatically.

Unfortunately, many of the companies that formed in the wake of this discovery never took the time to understand the science of the solutions needed and started creating their own way of selling UVC that rarely had anything to do with what was required to achieve a proper solution. Their approach was about selling a “blue light” that did everything the customer wanted for less.

The waters were muddied with misconception, misinformation, and misdirection. This led to a debate with specifying engineering firms as to how the solution should be specified without an accepted industry standard. Steril-Aire provided guidance based in science while others provided guidance based on what they could sell.

STERIL-AIRE EVIDENCE BASED DESIGN POSITION PAPER

Steril-Aire has the proven research and recognized solutions to support you. Please visit www.steril-aire.com. Or, contact Jeff Scheir at jeff@steril-aire.com

Science based & technology backed solutions
that create a better and safer environment
to live, work and breathe.
